

Digital Logic IC Families.

Logic Family: A group of IC's with same logic level & supply voltage are fabricated together to perform various logical function are referred as logic family.

Type of logic level:

- ① Positive
- ② Negative.

Type of semiconductor device.

① Unipolar

↓
charge carrier
(hole or electron)

② Bipolar.

↓
charge carrier
(hole or electron)

Digital logic family 3 types:

① Bipolar

⇒ electron, & hole
charge carrier

② Unipolar

⇒ electron or
hole charge
carrier

③ BiCMOS

⇒ I/P mos
⇒ O/P mos
